

"Feeds is my Friend"

A Tale of Heroes and Villains in a Drupal 6 to 7 Migration

December 5, 2013: GT Build Day

AdelleFrank.com

**“Feeds
is my
Friend”**

The Heroes (modules)

The Heroes

- Views (latest version 3.x) and Views Data Export (need for Drupal 6 site, so you can export data in a useful format).
- Feeds, Feeds Xpath Parser, Feeds Tamper (need for Drupal 7 site, so can ingest data; may need patch at <https://drupal.org/comment/7620089#comment-7620089>).
- Features (Best way to export Feeds Importers from Dev to Prod in D7)
- Masquerade (to pretend to be user #1, if can't get access to import views, etc. Don't leave "on" for Prod!)
- QA process (not a module, how to compare old & new data)

The Villains (field/entity types)

The Villains

- Taxonomy & Multiple values
- Users
- Text Input Formats
- Dates
- Pathauto
- Menus
- Attached files/images
- Sequence (what to do first)

The Tale of Two Sites (demo)
